

Get long term rust protection from a lanolin corrosion inhibitor.

- + Long lasting protection saving time on multiple reapplications.
- + Resists acids and alkalis.
- + Resists being washed off surfaces with cold water blasting. (After the carrier has evaporated)
- + Excellent protection for parts in storage or transit.
- + Safe to handle and apply.
- + Penetrates rust to protect metal and alloy surfaces.
- + Prevents moisture & oxygen from contacting metal surfaces.
- + Lifts rust scale.
- + Forms a moisture barrier preventing corrosive agents penetrating the surface.

High Performance
Lanolin corrosion inhibitor
For chassis protection

The environmentally friendly corrosion inhibitor for long term rust protection

Prolan is a New Zealand made natural lanolin corrosion inhibitor.

Prolan's main ingredient, lanolin (natural wool grease), is one of the most versatile natural substances on the planet. Its unique properties surpass other petrochemical products in performance, reliability, longevity, protection safety and asset maintenance.

Save time, use high performance, reliable Prolan Enduro for long lasting results.

Eliminate frequent reapplications, use a long lasting corrosion inhibitor.

www.prolan.co.nz

Common uses & applications:

- + To stop rust on 4WDs and quad bikes.
- + Chassis of trucks and vehicles.
- + Heavy machinery applications e.g. fertilizer loaders and spreaders.
- + Rust protection for exported machinery.
- + Rust protection on stored equipment (saw blades, plough boards, harvesters and mowers etc).

Prolan Enduro is easy and safe to apply using trigger pack sprayers, garden sprayers or airguns. Where possible remove any dirt, scale or other surface coating before applying Enduro and leave overnight or longer.

The range of Enduro products is available in Heavy and Medium grades, 1L, 4L, 20L tins. Medium grade Enduro comes in a handy to use 300gm aerosol.

It is often a losing battle trying to fight rust and corrosion on valuable assets, whether it develops from manure, dirt, salt or simply long term storage.

Prolan Medium Grade Enduro is a medium term protective coating which dries to a shiny finish with minimal tackiness, attracting less dust. Stays soft and wont crack.

- Excellent for vehicle or quadbike chassis on the farm or beach - applications can be recoated in 12-24 month intervals depending on the situation.
- Spray onto fibre-glass or plastic surfaces and rub into the surface to rejuvenate the colour.
- Use on electrical connections to prevent moisture penetration and electrolysis as is non-conductive to 70Kv and won't break down rubber and wiring.

Prolan Heavy Grade Enduro is a long term protective coating which is double the thickness of Medium Grade and lasts longer. Excellent for chassis of vehicles, panel work, marine boat trailers, any applications where a longer term protection is required.

Cold water blasting will not remove Prolan Enduro coatings. Prolan stays on once applied.
