

PROLAN
LANOLIN LUBRICANTS

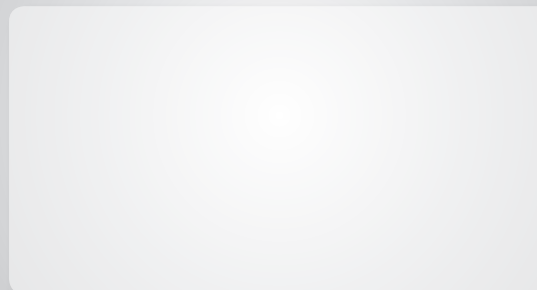

Get the best results from a high performance lanolin lubricant.

- + Long lasting protection saving time on multiple reapplications
- + Resists acids and alkali
- + Resists being washed off surfaces (after the carrier has evaporated)
- + Excellent protection for parts in storage or transit
- + Safe to handle and apply
- + Penetrates rust to protect metal & alloy surfaces
- + Prevents moisture & oxygen from contacting metal surfaces
- + Lifts rust scale
- + Forms a moisture barrier preventing corrosive agents penetrating the surface
- + Frees up seized parts
- + General workshop lubricant

Prolan products are distributed
around the world. Contact your local
agent or view our products online at

High performance
lanolin lubricant for the
agriculture industry

PROLAN
LANOLIN LUBRICANTS

An environmentally friendly workshop lubricant for
rust protection & anti-seize maintenance.

Prolan is a New Zealand made all-purpose natural lanolin lubricant and corrosion inhibitor.

Prolan's main ingredient, lanolin (natural wool grease), is one of the most versatile natural substances on the planet. Its unique properties surpass other petrochemical products in performance, reliability, longevity, protection, safety and asset maintenance.

Save time, use a high performance reliable product with long lasting results.

Medium grade liquid lanolin will preserve, lubricate, and protect your assets long-term.

www.prolan.co.nz

Often it's a losing battle trying to fight rust and corrosion on your valuable farming equipment, whether it develops from manure, dirt, sand, or simply long-term storage.

Use Prolan for long lasting lubricant and corrosion protection on tractors, harvesters, feeders, chains, conveyors, irrigation, spraying equipment, quad bikes, trucks, and electrical hardware.

+

Our medium grade liquid lanolin comes in 1L, 4L, and 20L cans for frequent use in farming environments. It also comes in a 300gm aerosol can, handy to keep in the tractor, on the bike, and another one in the shed.

+

Prolan Grease is an excellent anti-seize product and will perform in the harshest of conditions below 45°C. It is available in 0.5L, 1L, 4L, and 20L tubs.

On a quad bike chassis Prolan will last nine months or longer depending on use. Don't worry about giving the bike a good blast down with water as the lanolin wax residue resists water and will hold strong to the metal surface.

Common uses and applications include:

- + To stop rust on tractors and quad bikes
- + Rust protection on stored equipment (saw blades, plough boards, harvesters and mowers etc.)
- + Free up frozen components, padlocks, hinges, door handles and tools
- + Protection on battery terminals & electrical connections
- + Hicane protection for horticultural spray equipment
- + General workshop lubricant

All blends of Prolan products are very easy and safe to apply using trigger pack sprayers, garden sprayers or airguns. Where possible remove any rust, scale or other surface coating before application.

The complete range of Prolan products includes light, medium and heavy grade liquid lanolin lubricants, and anti-seize grease.
